Claims 1-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Firestone et al for essentially the reasons of record. The aminoquinoline acrylic acid could intramolecularly alkylate because the amino group could react with the acrylic acid double bond.

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The following terms are vague and indefinite: "non-cyclotoxic bioreductive moiety", "therapeutic agent", "bioreduction", "species having an alkylating center and being capable of undergoing a self-alkylation reaction" and "non-cytotoxic residue of the bioreductive moiety".
